

# ATG|pbx

**ATG|pbx is a hosted virtual PBX that delivers cost effective voice services and applications based on the resources that you consume. ATG|pbx integrates data services and combines disparate phone systems together without geographical boundaries providing even more cost savings across your business(es).**

## PBX Benefits:

- Available** Your phone system will reside in our datacenter providing 99.999% uptime and 99.999% availability by using enterprise grade routers, switches, servers and redundant power supply.
- Scalable** You can add phones without geographical boundaries. Add call queues on the fly; add a new interactive voice response (IVR) to handle a new product; open up a temporary office in another state on the other coast. All this within minutes.
- Reliable** Our datacenter provides redundant hardware and process to eliminate a single point of failure. Your phone system will reside on enterprise class servers and be supported by carrier class equipment.
